```
pdfcpu is a tool for PDF manipulation written in Go.

Usage:

    pdfcpu command [arguments]

The commands are:

    validate      validate PDF against PDF 32000-1:2008 (PDF 1.7)
    optimize      optimize PDF by getting rid of redundant page resources
    split         split multi-page PDF into several single-page PDFs
    merge         concatenate 2 or more PDFs
    extract       extract images, fonts, content, pages out of a PDF
    trim          create trimmed version of a PDF
    version       print pdfcpu version

Single-letter Unix-style supported for commands and flags.

Use "pdfcpu help [command]" for more information about a command.
```

w=200, h=100

pdfcpu is a tool for PDF manipulation written in Go.

Usage:

```
pdfcpu command [arguments]
```

The commands are:

validate	validate PDF against PDF 32000-1:2008 (PDF 1.7)
optimize	optimize PDF by getting rid of redundant page resources
split	split multi-page PDF into several single-page PDFs
merge	concatenate 2 or more PDFs
extract	extract images, fonts, content, pages out of a PDF
trim	create trimmed version of a PDF
version	print pdfcpu version

Single-letter Unix-style shortcuts for commands and flags.

Use `"pdfcpu help [command]"` for more information about a command.

pdfcpu is a tool for PDF manipulation written in Go.

Usage:

```
pdfcpu command [arguments]
```

The commands are:

validate	validate PDF against PDF 32000-1:2008 (PDF 1.7)
optimize	optimize PDF in possibly big reduction of redundant pdf resources
split	split multi-page PDFs into several single-page PDFs
merge	concatenate 2 or more PDFs
extract	extract images, fonts, content, pages out of a PDF
tree	create tree-visualisation of a PDF
version	print pdfcpu version

Single-line style supported for commands and flags.

The "pdfcpu help [command]" for more information about a command.

pdfcpu is a tool for PDF manipulation written in Go.

Usage:

pdfcpu command [arguments]

The commands are:

validate	validate PDF against PDF 32000-1:2008 (PDF 1.7)
optimize	optimize PDF by getting rid of redundant page resources
split	split multi-page PDF into several single-page PDFs
merge	concatenate 2 or more PDFs
extract	extract images, fonts, content, pages out of a PDF
trim	create trimmed version of a PDF
version	print pdfcpu version

Single-letter Unix-style supported for commands and flags.

Use "pdfcpu help [command]" for more information about a command.

pdftcpu is a tool for PDF manipulation written in Go.

Usage:

```
pdftcpu command [arguments]
```

The commands are:

validate	validate PDF against PDF 32000-1:2008 (PDF 1.7)
optimize	optimize PDF by getting rid of redundant page resources
split	split multi-page PDF into several single-page PDFs
merge	concatenate 2 or more PDFs
extract	extract images, fonts, content, pages out of a PDF
trim	create trimmed version of a PDF
version	print pdfcpu version

Single-letter Unix-style shortcuts for commands and flags.

Use "pdftcpu help [command]" for more information about a command.

pdfcpu is a tool for PDF manipulation written in Go.

Usage:

```
pdfcpu command [arguments]
```

The commands are:

validate	validate PDF against PDF 32000-1:2008 (PDF 1.7)
optimize	optimize using various tricks of redundant page resources
split	split multi-page PDF into several single-page PDFs
merge	concatenate 2 or more PDFs
extract	extract images, fonts, content, pages out of a PDF
trim	create trimmed-version of a PDF
version	print pdfcpu version

Single-letter Unix-style supported for commands and flags.

Use "pdfcpu help [command]" for more information about a command.

pdftcpu is a tool for PDF manipulation written in Go.

Usage:

```
pdftcpu command [arguments]
```

The commands are:

validate	validate PDF against PDF 32000-1:2008 (PDF 1.7)
optimize	optimize PDF by getting rid of redundant page resources
split	split multi-page PDF into several single-page PDFs
merge	concatenate 2 or more PDFs
extract	extract images, fonts, content, pages out of a PDF
trim	create trimmed version of a PDF
version	print pdfcpu version

Single-letter Unix-style supported for commands and flags.

Use "pdftcpu help [command]" for more information about a command.

pdfcpu is a tool for PDF manipulation written in Go.
