# Boxes & Margin

```
pdfcpu is a tool for PDF manipulation written in Go.

Usage:

    pdfcpu command [arguments]

The commands are:

    validate    validate PDF against PDF 32000-1:2008 (PDF 1.7)
    optimize    optimize PDF by getting rid of redundant page resources
    split        split multi-page PDF into several single-page PDFs
    merge        concatenate 2 or more PDFs
    extract      extract images, fonts, content, pages out of a PDF
    trim         create trimmed version of a PDF
    version      print pdfcpu version

Single-letter Unix-style supported for commands and flags.

Use "pdfcpu help [command]" for more information about a command.
